1 WP8 URI Associations

One of the new features came with WP8 was [URI Associations](#), it allow apps pass information to 3rd App while launching it.

An App need to register its URI scheme on system before other apps can launch it. UC Browser has completed this registration in version 2.8, March 2013. So all current version of UC Browser will support URI Associations

2 UC Browser URI Scheme

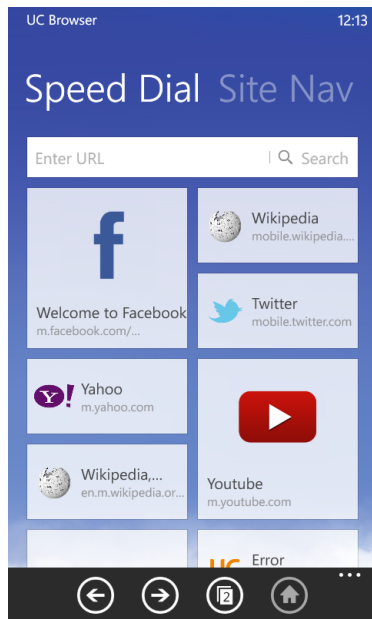

The keyword of URI Scheme for UC Browser was: uc-url

Uri scheme	Description
uc-url:[URL]	Launches the UC browser and navigates to the specified URL.

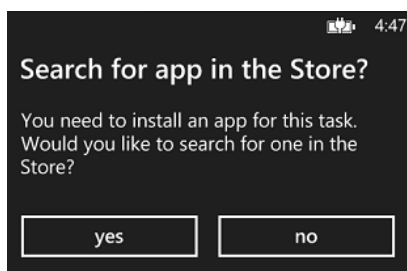

Sample code

```
Windows.System.Launcher.LaunchUriAsync(new Uri("uc-url:http://wap.uc.cn"));
```

[URL] was optional, if no url was passed, UC will open homepage, which was Speed Dial.

If users do not have UC Browser installed on their Windows Phone 8, the system will notice them with a pop up notification

3 Suggestion and Contact

If you got any suggestion, like request for more URI Scheme or would like UC Browser to launch your App under certain circumstance, feel free to contact our Product Manager
